The WNRT-617G features latest IEEE 802.11n radio with 1T1R antenna technology to provide improved wireless speed and coverage with up to 150Mbps upload and download data rate. The incredible wireless speed makes it ideal for handling multiple video stream, on-line music, VoIP and data streams at the same time stably and smoothly. It is also backward compliant with 802.11g and 802.11b standards; thus it is no need to change the existing network for maintaining connectivity. Just connect to the WNRT-617G, you can immediately enjoy the high-speed wireless sharing.

Wireless Coverage Plus !

With one 5dBi high-gain antenna attached, the WNRT-617G provides stronger signal quality and more excellent performance than normal wireless routers especially when in the long range or poor environment condition for further wireless coverage range. With the detachable RP-SMA connector design, the WNRT-617G allows users to manually exchange higher gain antenna for greater wireless distances and coverage range across home and building. Besides essential wireless sharing for Wi-Fi clients, the WNRT-617G provides WDS (Wireless Distribution System) bridge mode to facilitate wireless network deployments and range expanding. It provides more flexibility for users while establishing wireless network.

Wide Range of Wireless Security Support

To secure the wireless communication, the WNRT-617G supports not only 64/128/152-Bit WEP, but also up-to-date encryptions including WPA-PSK/WPA2-PSK with TKIP/AES, wireless MAC filtering and SSID broadcast control to consolidate the wireless network security and prevent unauthorized wireless connection.

Easy Secure Wireless Connection

In order to simplify security settings for home and SOHO network, the WNRT-617G supports Wi-Fi Protected Setup (WPS) with configuration in PBC and PIN type. By just push the WPS button or key in the PIN code, the secure connection between the WNRT-617G and wireless clients will be built immediately, which offers a convenient and fast method for users.

WPS (Wi-Fi Protected Setup) Quick & Easy Wireless connection

Advanced Firewall Security

To protect user's network from external attacks, the WNRT-617G provides dual firewall mechanisms – NAT and SPI. The NAT function allows multiple users to access to Internet via a single legal IP, and the SPI (Stateful Packet Inspection) firewall protects intranet PCs from unauthorized access and prevents possible DoS attacks from the Internet. In the aspect of firewall, the WNRT-617G supplies flexible IP-Based Access Control, schedulable MAC access control and URL block to prevent possible hackers attack.

Full Functioned Router

As a robust broadband router, the WNRT-617G supports various Internet connection protocols and auto detect function to establish Internet service when the ISPs use different connection type. It also provides Virtual Server and DMZ functions for LAN PC to act as an application server and offer certain service to the clients in the LAN. The WNRT-617G allows users to setup trigger ports of special applications and utilize Internet services smoothly. Moreover, IP-Based ingress and egress bandwidth control optimizes time-critical applications such as VoIP or video conference not to be interrupted or lagged due to P2P file download by other clients in the same network environment.
